CONVORIA / MICROSOFT LICENCE BILLING REVIEW

Sample report

Fictional data, illustrative prices, September and October 2026

IMPORTANT: FICTIONAL EXAMPLE. All customer codes, quantities and prices in this report are invented for demonstration. This is not a real MSP review, a benchmark or a typical result.

At a glance

12 Customers reviewed	**15** Licence lines compared	**6** Potential discrepancies	**4** Gaps in both periods
2 Latest-period-only gaps (not counted)	**£449** Estimated monthly difference (potential, unverified)	**£37.50** Recurring over-billing exposure per month	**£0** Confirmed recoverable revenue

What the sample shows

The workbook compares Microsoft/CSP invoice quantities with PSA billing quantities for the same customer and licence across two billing periods. It classifies differences for investigation. It does not treat them as confirmed revenue.

Customer	Licence	Microsoft/ CSP	PSA billing	Diff.	Finding	Est. per month
C09	Business Basic	35	none	**+35**	Customer not in PSA; confirm contract status	£241.50
C08	Business Premium	42	36	**+6**	Gap in both periods	£120.00
C03	Business Standard	85	78	**+7**	Gap in both periods	£87.50
C05	Business Standard	48	40	**+8**	Latest period only; possible timing	not counted
C07	Business Standard	22	25	**-3**	Billed above supplier quantity	£37.50 exposure (not in £449)
C12	Business Basic	24	25	**-1**	Latest period only; possible missed removal	not counted

Quantities shown are for the latest period (October). Differences are the Microsoft/CSP quantity minus the PSA quantity. The £449 estimate includes the three gaps present in both periods, including the customer absent from the PSA. Latest-period-only items (£106.90 per month in this sample) are excluded until they repeat. The £5,388 annualised figure is a simple multiplication, not a forecast.

How to interpret the findings

Potential differences are not proof of lost revenue

This report is a triage aid. It helps identify records worth checking. It does not determine what a customer contract allows an MSP to bill.

What must be verified

Check	Why it matters
Customer and tenant mapping	Names, tenant IDs and customer records may not align between the distributor and PSA exports.
Contract entitlement	Contract terms, licence bundles and agreed seat quantities determine what is billable.
Customer invoice	Check what was actually invoiced, including credits, discounts, proration and billing dates.
Timing and exceptions	A one-period difference may reflect timing. Duplicates, credits, missing periods and unmapped rows need resolution.

Method in brief

1. **Compare two periods.** Microsoft/CSP invoice exports are compared with PSA billing exports for September and October 2026.
2. **Match customer and SKU.** Customer and product names are mapped so equivalent records can be compared. Anything that cannot be mapped is listed as an exception, never dropped.
3. **Classify differences.** Gaps in both periods, latest-period-only gaps, over-billing and unmatched customers are separated. Credits and duplicate rows are held back for verification.
4. **Verify before action.** A finding becomes verified only after the MSP checks the customer invoice, contract and billing policy.

> **Confirmed recoverable revenue in this fictional sample: £0.** The workbook records zero because none of the potential findings has been verified against contracts and customer invoices. The £449 per month is an unverified estimate only.

Early access and data handling

- **Toolkit: £49 for the first five buyers, then £99.** One-time price. Request early access by email and we reply within one working day with a payment link. The first 5 buyers also get a 20-minute mapping session on their own export. 14-day refund if it is not useful.
- **Done-for-you review: £495 for up to 25 customers, £795 for 26 to 60.** Larger businesses are quoted after we see the export formats. It covers your last two billing periods, an exceptions list and a walkthrough call. Half to start, half on delivery. Correcting agreements or a monthly check is quoted separately. Scope and terms are agreed in writing before work begins.
- **Your data.** With the toolkit nothing is sent to us. For a review we need customer-level licence counts only, not user names, and names can be coded. Transfer method, access and deletion are agreed in writing before any files are shared.

Scope and limitations

This sample uses synthetic customer records and illustrative prices. Actual exports vary by PSA, distributor, SKU naming, billing periods and pricing structure, and mapping may be required. The toolkit has not yet been tested on real MSP data. The result depends on the completeness and accuracy of the source exports. It is not financial, legal or tax advice, and no recovery is guaranteed.
