CONVORIA / MICROSOFT LICENCE BILLING REVIEW

Sample report

Fictional data · illustrative prices · September and October 2026

IMPORTANT — FICTIONAL EXAMPLE
All customer codes, quantities and prices in this report are invented for demonstration. This is not a real MSP review, a benchmark or a typical result.

At a glance

12	15	6	£449
Customers reviewed	Licence lines compared	Potential discrepancies	Estimated monthly difference[1]

4 Recurring across both periods	**2** Latest-period-only gaps	**£0** Confirmed recoverable revenue	**£37.50** Recurring over-billing exposure/month

What the sample shows

The workbook compares Microsoft/CSP invoice quantities with PSA billing quantities for the same customer and licence across two billing periods. It classifies differences for investigation rather than treating them as confirmed revenue.

CUSTOMER CODE	LICENCE	SAMPLE FINDING	EST. MONTHLY
C09	Business Basic	Customer appears in supplier data but not PSA	£241.50
C08	Business Premium	Recurring under-billing candidate	£120.00
C03	Business Standard	Recurring under-billing candidate	£87.50
C05	Business Standard	Latest-period-only gap; possible timing	Excluded[1]
C07	Business Standard	Recurring over-billing / possible credit exposure	£37.50[2]
C12	Business Basic	Latest-period-only over-billing	Excluded[1]

[1] The £449 estimate includes recurring under-billing candidates and a customer absent from the PSA. Latest-period-only items (£106.90/month in this sample) are excluded until they repeat. The £5,388 annualised figure is a simple multiplication, not a forecast.

[2] Over-billing exposure is shown separately; it is not included in the £449 estimate.

HOW TO INTERPRET THE FINDINGS

Potential differences are not proof of lost revenue

This report is a triage aid. It helps identify records worth checking; it does not determine what a customer contract permits an MSP to bill.

What must be verified

CHECK	WHY IT MATTERS
Customer and tenant mapping	Names, tenant IDs and customer records may not align between the distributor and PSA exports.
Contract entitlement	Contract terms, licence bundles and agreed seat quantities determine what is billable.
Customer invoice	Check what was actually invoiced, including credits, discounts, proration and billing dates.
Timing and exceptions	A one-period difference may reflect timing. Duplicates, credits, missing periods and unmapped rows need resolution.

Method in brief

1. Compare two periods. Microsoft/CSP invoice exports are compared with PSA billing exports for September and October 2026.

2. Match customer and SKU. Customer and product names are mapped so equivalent records can be compared.

3. Classify differences. Recurring quantity gaps, latest-period-only differences, over-billing and unmatched customers are separated.

4. Verify before action. A finding becomes verified only after the MSP checks the relevant customer invoice, contract and billing policy.

CONFIRMED RECOVERABLE REVENUE IN THIS FICTIONAL SAMPLE: £0

The workbook records zero confirmed recoverable revenue because none of the potential findings has been verified against contracts and customer invoices. The £449/month is an unverified estimate only.

Scope and limitations

This sample uses synthetic customer records and illustrative prices. Actual exports vary by PSA, distributor, SKU naming, billing periods and pricing structure. Mapping may be required. The result depends on the completeness and accuracy of the source exports. It is not financial, legal or tax advice, and no recovery is guaranteed.
